Practice quiz on Types of Functions

TOTAL POINTS 6

1. Suppose that $A = \{1, 2, 10\}$ and $B = \{4, 8, 40\}$. Which of the following formulae do **not** define a function $f : A \to B$?

   ○ $f(1) = 4, f(2) = 4$, and $f(10) = 4$.

   ◉ $f(1) = 5, f(2) = 8$, and $f(10) = 40$.

   ○ $f(a) = 4a$, for each $a \in A$

   ○ $f(1) = 4, f(2) = 40$, and $f(10) = 8$.

   1/1 point

   ✓ **Correct**
   A function $f : A \to B$ is a rule which assigns an element $f(a) \in B$ to each $a \in A$. In this case, unfortunately, $f(1) = 5 \notin B$.

2. Suppose that A contains every person in the VBS study (see the second video in the course if you're confused here!). Suppose that $Y = \{+, -\}$ and $Z = \{H, S\}$

   Suppose that $T : A \to Y$ is the function which gives $T(a) = +$ if person a tests positive and $T(a) = -$ if they test negative.

   Suppose that $D : A \to Z$ is the function which gives $D(a) = H$ does not actually have VBS and $D(a) = S$ if the person actually has VBS.

   Which of the following must be true of person a if we have a false positive?

   ◉ $T(a) = +$ and $D(a) = H$

   ○ $T(a) = -$ and $D(a) = H$

   ○ $T(a) = -$ and $D(a) = S$

   ○ $T(a) = +$ and $D(a) = S$

   1/1 point

   ✓ **Correct**
   Recall that a false positive is a positive test result (so $T(a) = +$) which is misleading because the person actually does not have the disease ($D(a) = H$)

3. Consider the function $g : \mathbb{R} \to \mathbb{R}$ defined by $g(x) = x^2 - 1$. Which of the following points are **not** on the graph of g?

   ○ $(0, -1)$

   ○ $(1, 0)$

   ○ $(-1, 0)$

   ◉ $(2, -1)$

   1/1 point

   ✓ **Correct**
   Recall that the graph of g consists of all points (x, y) such that $y = g(x)$. Here $g(2) = 3 \neq -1$, so the point $(2, -1)$ is \emph{not} on the graph of g.

4. Let the point $A = (2, 4)$. Which of the following graphs does *not* contain the point A?

   ◉ The graph of $h(x) = x - 1$

   ○ The graph of $s(x) = x^2$

   ○ The graph of $f(x) = 2x$

   ○ The graph of $g(x) = x + 2$

   1/1 point

   ✓ **Correct**
   The graph of h consists of all points (x, y) such that $y = h(x)$. Here $h(2) = 1 \neq 4$, so the point $(2, 4)$ is *not* on the graph of h.

5. Suppose that $h(x) = -3x + 4$. Which of the following statements is true?

   ○ h is a strictly increasing function

   ○ h is neither a strictly increasing function nor a strictly decreasing function.

   ○ All statements are correct

   ◉ h is a strictly decreasing function

   1/1 point

6. Suppose that $f : \mathbb{R} \rightarrow \mathbb{R}$ is a strictly increasing function, with $f(3) = 15$

`1 / 1 point`

Which of the following is a possible value for $f(3.7)$?

○ 3

○ −3

◉ 17

○ 14.7
